The clear alternative to traditional braces

Invisalign uses custom-made, removable aligners to gently shift your teeth. No metal, no wires, no food restrictions. Average treatment: 12-18 months. Perfect for adults and teens.

- ✔ Virtually invisible — no one will notice
- ✔ Removable — eat, brush, floss normally
- ✔ Fewer office visits than traditional braces
- ✔ Predictable results with 3D treatment planning
- ✔ Covered by most dental insurance plans

What Invisalign can correct

😁 **Crowded Teeth**
Overlapping or twisted teeth — Invisalign creates space for a straighter smile.

↔️ **Gapped Teeth**
Close unwanted spaces between teeth for a more uniform appearance.

📏 **Overbite**
Upper teeth extend too far over lower teeth — corrects bite alignment.

📐 **Underbite**
Lower teeth protrude past upper teeth. Invisalign can address many underbite cases.

🔄 **Crossbite**
Upper and lower teeth don't align properly when biting down.

📈 **Open Bite**
Front teeth don't touch when biting — Invisalign can close open bites.

Your Invisalign journey

From consultation to your new smile — clear, predictable steps.

📋 **1. Free consultation**
Meet with an Invisalign provider. Discuss goals, take digital scans (no gooey impressions!).

🎯 **2. 3D treatment plan**
See your before & after simulation. Know exactly how your smile will look.

🦷 **3. Receive aligners**
Custom aligners delivered every 1-2 weeks. Wear 20-22 hours per day.

😁 **4. New smile!**
Finish treatment, get retainers. Enjoy your straight, confident smile.

Invisalign vs. DIY aligners (SmileDirectClub, Byte)

Invisalign is overseen by a licensed orthodontist or dentist — in-person monitoring ensures safe, predictable results. DIY kits lack professional supervision for complex movements or bite issues.

👨‍⚕️ **Doctor-supervised**
Every step monitored by a dental professional. Adjustments made as needed.

🎯 **Complex case capable**
Treats severe crowding, rotations, bite issues — not just mild cases.

🦷 **Attachments & elastics**
SmartForce attachments and rubber bands for precision movement.

📊 **ClinCheck software**
Proprietary 3D simulation shows final result before you start.
